Profile Summary

I am a Junior Frontend Developer with hands-on experience building full-stack applications using Ruby on Rails, Python, JavaScript, and React. Currently developing web tools and designing user-friendly interfaces at Arise Church, with prior experience contributing to Seequent's Evo platform using Python, React, and MongoDB. Passionate about creating technology that combines clean code with intuitive UI/UX design. Seeking a graduate developer role to deliver impactful solutions while growing technical expertise in a collaborative team environment.

Most Notable Projects

Evo Data Stages

Software Engineering Intern, Seequent | Final semester capstone project

- Interned as a Software Engineer at Seequent in the final semester of my Bachelor of ICT at Ara Institute of Canterbury.
- Worked on a data management feature for Seequent's EVO platform, a cloud-based ecosystem used by geoscientists in mining and civil engineering to manage and visualise geoscience data collaboratively.
- Focused on the EVO Data Stages feature, which lets users classify geoscience objects and provide detailed status updates, assigning stages such as "approved" or "work in progress" to support better workflow management.
- Successfully implemented the first phase of the feature, enabling users to assign hardcoded stages to their data objects.
- Improved data interaction, collaboration, and clarity for users working across shared geoscience datasets.
- Contributed insights from team discussions with architects and the product owner that helped shape the feature's roadmap, including administrator-editable stages and triggering actions for streamlined data workflows.

The Gathering 2026 App

Role: Software Developer

Organisation: Arise Church

Technologies: React, Ruby on Rails, Tailwind, Firebase, JavaScript, HTML5, CSS3, Capacitor, Android Studio, Google Play Console, Git, GitLab

- Developed the official mobile application for The Gathering 2026, a nationwide, multi-day conference bringing together attendees from across New Zealand.
- Supported a programme featuring keynote speakers, worship sessions, children's programmes, and community activities.
- Built the app to give attendees a simple, centralised way to access event information throughout the conference.
- Reduced confusion across a busy multi-day schedule by providing quick access to speaker information, venue details, and practical event resources.

[Visit Website](#) | [App Store](#) | [Google Play](#)

My Contribution

- Built the mobile application using React.
- Learned and implemented Capacitor to package the React application as a native Android app.
- Configured and tested Android builds using Android Studio.
- Prepared the application for deployment through the Google Play Store.
- Developed a clean, easy-to-navigate interface focused on helping attendees quickly find the information they needed.

What I Learned

This project challenged me to step outside my comfort zone and accelerated my growth as a software developer.

- **Patience and perseverance:** Learning new technologies can be challenging at first, but I discovered that consistent practice and problem-solving make complex tasks become much more manageable over time.
 - **Learning new technologies:** I gained hands-on experience with React for mobile development, Capacitor, Android Studio, and the Android app deployment process.
 - **Problem-solving:** I developed confidence in researching unfamiliar concepts, experimenting with solutions, and debugging issues independently.
 - **Clear communication:** I learned how to communicate technical findings effectively by being concise, focusing on the key issue, and presenting solutions clearly to teammates and stakeholders.
 - **Continuous improvement:** This project reinforced the importance of embracing new challenges, knowing that every difficult task becomes easier with experience and repetition.
-

TECHNICAL SKILLS

Programming Languages & Frameworks

Python (Django, FastAPI), Ruby on Rails, JavaScript (working towards proficiency), HTML, CSS

Frontend & UI Development

React, Tailwind CSS, Material UI (MUI), TypeScript (working towards proficiency), Canva (UI/UX design support)

Databases & APIs

MongoDB, PostgreSQL, MySQL, REST APIs, Postman

Development Tools & Practices

Git, GitHub, GitLab, Agile/Scrum methodologies, Visual Studio Code, Docker, CI/CD pipelines

Cloud & Deployment

Google Cloud Platform (deployment and application hosting), basic exposure to cloud-based workflows

Mobile Development (Exposure)

Android Studio, Xcode (running and testing mobile applications on Android and iOS environments)

Software Engineering Practices

Debugging, code reviews, sprint planning, technical documentation, full software development lifecycle (SDLC)

Additional Tools

Pydantic (data validation), PlantUML (architecture diagrams), SharePoint, OneDrive

Work History

ARISE CHURCH - SOFTWARE DEVELOPER (Part-time)

March 2025 - Present | Christchurch, NZ

- Develop and maintain web applications and internal tools using Ruby on Rails, JavaScript, and Tailwind CSS, serving church staff and congregation members
- Design and implement RESTful API endpoints to support database operations and integrate with internal app ecosystems
- Collaborate with cross-functional teams to gather requirements, plan features, and deliver solutions from concept through deployment
- Debug and troubleshoot production issues to ensure application security, functionality, and reliability
- Rewrite and maintain technical documentation to improve code quality and knowledge transfer across development team
- Participate in agile development practices including regular team meetings, code reviews, and sprint planning
- Working with Kubernetes for container orchestration and deployment
- Implemented and maintained CI/CD pipelines using Git and GitLab
- Managed site changes and deployments via Google Cloud

SEEQUENT – SOFTWARE ENGINEERING INTERN

19 August 2024 to 28 October 2024

- Developed a "stages" feature as part of a Capstone project, collaborating with mentors and team members.
- Brainstormed and explored solutions for implementing the feature.
- Planned and designed both backend and frontend requirements for the feature.
- Developed and wrote backend and frontend code.
- Debugged and troubleshoot code issues.
- Worked with Git and Gitlab
- Used tools like Python, MongoDB and Postman API to develop new stages feature

PLATYPUS SHOES NZ

20 August 2020 to 14 March 2024

- Welcomed and greeted customers, helping them find shoes that fit their outfits and style.
- Ensured high levels of customer satisfaction by providing personalized service.
- Kept up to date with product information to provide customers with accurate advice.
- Checked shoe fittings to ensure they fit properly

Education and Qualifications

Bachelor of ICT (Specialising in Software Development)

Ara Institute of Canterbury | Christchurch, NZ

July 2022 – December 2024

Diploma in IT Technical Support Level 5

Ara Institute of Canterbury | Christchurch, NZ

July 2021 – June 2022

Community and Voluntary work

- Volunteer Role Model Inspiring the future Volunteer - Hillmorton High (2024–2025)
 - Guest Speaker for Year 13 Career Presentations - Hillmorton High (2023–2024)
 - Sunday School Teacher & Volunteer - Harmony Church (2019 - 2020)
 - Sunday School Volunteer (Kids leader) - Arise Church (2025 - Present)
 - Student Board Representative, Hillmorton High School (2019 - 2020)
 - Student Representative, Ara Institute of Canterbury (2023 - 2024)
-

INTERESTS

User experience, reactive arts, emerging technologies (AI), reading, coding, fashion & makeup.
